

Unit 2 (AI)

Agents

Agent : Percept → Decision → Action

Goals :

P → Performance
E → Environment
A → Actions
S → Sensors

↑ Performance
Rational Action
Optimize result

Limited Intelligence

Simple Reflex

- Current Perception
- No history
- If-then rule
- Fully observable environment

eg! AC

Goal Based (Theoretical)

- Searching & planning
 - Supervised Learning
 - Choose from multiple option
- eg! Path finding

Agents

Model Based

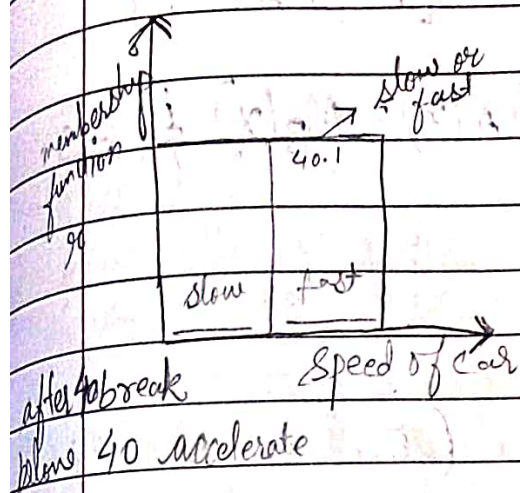

- Partially Observable
 - Store History
- eg! Self Driven Car

Utility Based

- focus on utility not goal
 - happy & unhappy state
- eg! GPS

Fuzzy Logic

Represent uncertainty with degree $[0, 1]$ belongingness of a member

Boolean $\rightarrow \{(1, 1) (2, 1) \dots\}$

fuzzy $\rightarrow \{(1, .8) (2, .7) \dots\}$

0 if speed ≤ 40
1 if speed ≥ 50

Operations

$U = \{5, 10, 20, 25, 30, 40\}$

$A = \{(10, .2) (20, .4) (25, .7) (30, .9) (40, 1)\}$

$B = \{(10, .4) (20, .1) (25, .9) (30, .2) (40, .6)\}$

$$\text{UNION} = \max \{ M_A(x), M_B(x) \} \quad x \in U$$

$$\text{INTERSECT} = \min \{ M_A(x), M_B(x) \}$$

$$\text{COMPLIMENT} = M_A - (x) = [1 - M_A(x)]$$

$$\text{EQUALITY} = A=B \text{ if } M_A(x) = M_B(x) \text{ for } x \in S$$

$$\text{Union} = \{ (10, .4) (20, .4) (25, .9) (30, .9) (40, 1) \}$$

$$\text{Intersect} = \{ (10, .2) (20, .1) (25, .9) (30, .2) (40, .6) \}$$

$$\text{Compliment}_A = \{ (10, .8) (20, .6) (25, .3) (30, .1) (40, 0) \}$$

$$\text{Compliment}_B = \{ (10, .6) (20, .9) (25, .1) (30, .8) (40, .4) \}$$

AI

Knowledge ^{representation} ~~representation~~ and reasoning

Knowledge \rightarrow Reason \rightarrow Intelligent
 \downarrow

Syntax (representation)

Semantic (meaning)

~~representation~~

① Logic $\begin{cases} \text{Propositional Logic (T/F)} \\ \text{Predicate (quantifiers)} \end{cases}$ $\begin{cases} \text{There exist} \\ \text{for all} \end{cases}$

② Rules

③ Semantic net
related objects eg: cow, tiger

④ Frames (Slots and filter)
template for DB objects attributes

⑤ Script

Proposition Logic

(T/F)

represent knowledge in the form of statements & deduce it as reason / argument.

eg: Sky is blue
some students are intelligent

Syntax Semantic

atomic complex

no symbols 2 or more statements

eg: $1 + 1 = 2$ (T)

\neg Negation (Today is not Friday)
 \vee Disjunction (You should eat or watch TV)
 \wedge Conjunction (Wash your hands & eat food)
 \rightarrow if then (If it rains then roads will be wet)
 \leftrightarrow iff (I will go to mall iff I have to shop)

P	Q	$\neg P$	$P \vee Q$	$P \wedge Q$	$P \rightarrow Q$	$P \leftrightarrow Q$
T	T	F	T	T	T	T
T	F	F	T	F	F	F
F	T	T	T	F	T	F
F	F	T	F	F	T	T

You can access the internet from campus only if you are CSE student or you are not freshmen.

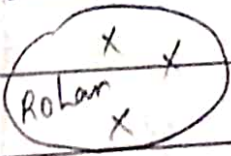

$$P \rightarrow R \vee Q$$

Predicate Logic

proposition) $pro \rightarrow \text{colour of ball is red}$

predicate) $pre \rightarrow \underbrace{\text{color}}_{\text{predicate}} (\underbrace{\text{ball, red}}_{\text{arguments}})$

eg. Rohan likes apple.

All students are intelligent Rohan is a student
 Rohan is intelligent  Inference

Everybody loves somebody.  Represent Quantity

Quantifiers
 universal \forall (for all)
 existential \exists (there exists)

11/05/22

Knowledge Cycle

Types of Knowledge

- Declarative
- Structural
- Procedural
- Meta
- Heuristic

Semantic Network

- Tom is a cat.
- Tom is grey in color
- Tom is mammal
- Tom is owned by sam.

Frames (name + value)
